

Quickstart Guide — NAVIA_PATH

Get started with NAVIA_PATH in 5 minutes.

Step 1: Download & Extract

Extract the archive `NAVIA_PATH-v1.1.2-windows-x64.zip` into your directory of choice, for example:

```
C:\NAVIA_PATH
```

Step 2: Choose Your LLM Provider

NAVIA_PATH supports 5 leading AI providers:

- **Google Vertex AI** (*Default, recommended*)
- **Google Gemini Direct API**
- **OpenAI** (GPT-4o)
- **Anthropic Claude** (Claude 3.5 Sonnet)
- **Azure OpenAI Service**

Step 3: Prepare Your Configuration

In the `config\providers\` subfolder, copy the example template for your chosen provider:

- **For Vertex AI:**

```
copy config\providers\.env.vertex.example config\providers\.env.vertex
```

Open `.env.vertex` and set your `NAVIA_VERTEX_PROJECT`. Authenticate once with Google Cloud CLI:

```
gcloud auth application-default login
```

- **For OpenAI:**

```
copy config\providers\.env.openai.example config\providers\.env.openai
```

Open `.env.openai` and paste your `OPENAI_API_KEY`.

(For other providers, consult `PREPARE_LLM_ENVIRONMENTS.txt`).

Step 4: Run the Environment Health Check

Execute the built-in diagnostic command:

```
.\NAVIA_PATH.exe --check
```

The report should confirm your setup:

```
=====
NAVIA_PATH v1.1.2 - Runtime Environment Check
=====
Executable       : C:\NAVIA_PATH\NAVIA_PATH.exe
Runtime Root     : C:\Users\... \AppData\Local\NAVIA_PATH
Write Access     : OK
Provider         : vertex
Config File      : config\providers\.env.vertex (Present)
Configuration    : OK
Authentication   : OK
Model           : gemini-3.8-flash
Edge Browser     : OK
Chrome Browser   : OK
CDP Profiles     : EdgeProfile, ChromeProfile (Ready)
=====
RESULT : OK - NAVIA_PATH is ready for execution.
```

Step 5: Execute Your First Mission

Command Line:

```
.\NAVIA_PATH.exe --prompt "Navigate to https://example.com and extract page details"
```

From UiPath Studio:

Open the `uipath\NAVIA_PATH.Activities` project in UiPath Studio or reference the activity in your workflows. Drop the `NAVIA PATH - Edge` or `NAVIA PATH - Chrome` activity into your sequence, set your prompt, and retrieve the result from `out_ExecutionResult`.
